

RELEASE HIGHLIGHTS - JUNE 2014

Spatial Dimension releases Version 5.2 of FlexiCadastrre

Our Product and Development teams have listened to our expanding global user base and have once again released an exciting blend of new features and significant enhancements to FlexiCadastrre, the world's leading mining cadastre and mineral rights management solution. We encourage all our users to upgrade now and experience significant operational benefits.

Management of Production Data

Extractive industry production data can be managed and stored in FlexiCadastrre. Production figures, currency values, commodity information and more can now all be configured on *Statistics Actions*.

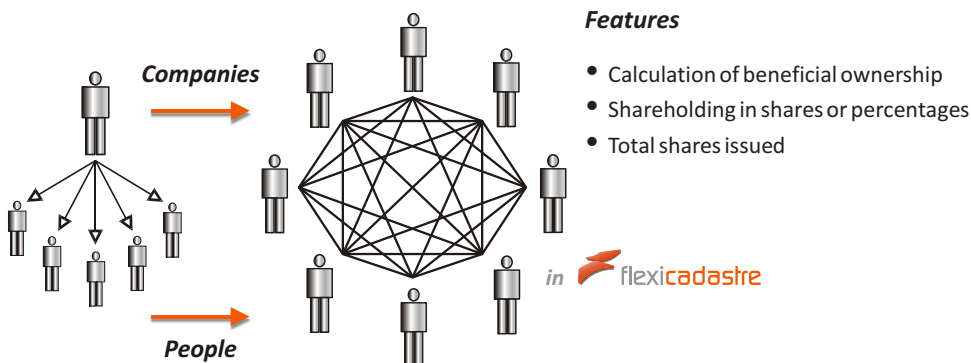

Importantly, managers can now report on this information alongside their expenditure, operational and other day to day commitments.

Improved Interface and Homepage

Further improvements have been made to the general interface and the user homepage. Newly styled buttons, simplified icons, improved page scrolling and object-specific toolboxes make up just some GUI enhancements. The Search Summary widget has been upgraded with the ability to summarise your data by intersecting searches. The Tasks widget now allows you to schedule a recurring series of actions directly from your home page.

Company Secretarial and Shareholding

As FlexiCadastrre is increasingly used to ensure compliance and contribute to transparency in the extractive sector, the existing functionality has been expanded to support more complex modelling of company ownership structures. New Shareholder functionality has been introduced on Companies to display multiple levels of ownership, and shareholdings expressed in shares or percentages. In addition, FlexiCadastrre now tracks and displays the chronological history of a company's name changes and company directorships.

More New Features ...

150+ New Features
600+ Enhancements

Contract Management

- Display of multiple agreement types in FlexiCadastrre Main menu
- "In Perpetuity" flag available

- Option to include bank account details in Action Report
- Upgrade of Competitor Monitoring Change Report

Business Intelligence

- SSRS (SQL Server Reporting Services) Reports can now be generated from within FlexiCadastrre

Support for all major browsers

Spatial Searches for Documents in the Map

Searching for documents using FlexiCadastré has become both easier and more powerful.

Documents can now be searched for in the map interface, allowing you to select and view all documents associated to any of your licenses, agreements or groups.

Groups in FlexiCadastré

The ability to manage licenses as part of an associated set using the Groups functionality has been strengthened in the latest version of FlexiCadastré.

For jurisdictions where licenses are managed as part of a larger project or reporting group, you can now access many of the tools already available for licenses and agreements. Whether it's the improved searching capability, or the availability of standard group templates to improve data entry, or the expanded set of attributes and business rules to further automate the management of your license groups, FlexiCadastré now offers the complete solution for these datasets.

Spatial Validations

The advanced Spatial Validation functionality for licenses and agreements has been enhanced and now allows for business rules to run spatial validations as background processes. These automated validations on your licenses, agreements or groups can save you time and allow your workflows to be more streamlined.

Validation Checklist

First-Come-First-Served

The First-Come-First-Served toolset, long used by government clients has been enhanced to better manage applications for enlargement to existing active licenses.

Government Mining Cadastre Portals powered by FlexiCadastré

Spatial Dimension hosts a number of Public Mining Cadastre Portals for Government agencies. These portals provide a spatial view into the mining cadastre data and are intended to improve stakeholder communications, reduce corruption and improve transparency. Over the last year, new portals have been released to the public for Mozambique, Namibia and Papua New Guinea, with a host of other countries to be released later in 2014. See www.spatialdimension.com/Map-Portals.

More New Features ...

Spatial / GIS

- Generate KML strings for point-based license types
- Support for NTv2 geographic transformations

Multilingual functionality

- FlexiCadastré is available in English, Spanish, Portuguese and French
- Multilingual functionality now includes full Unicode support for non-Latin scripts

Bulk Productivity Module

- Option to include Legal Description of land parcel in Bulk License Importer
- Bulk License Importer now provides ability to update existing licenses
- Ontario Work Filing Wizard improved to cater for cash payments in lieu of work
- Upgrades to Ontario Claim Renewal Wizard
- Improvements to Quebec Work Filing process
